INNOVATIVE FIRE PROTECTION SOLUTIONS

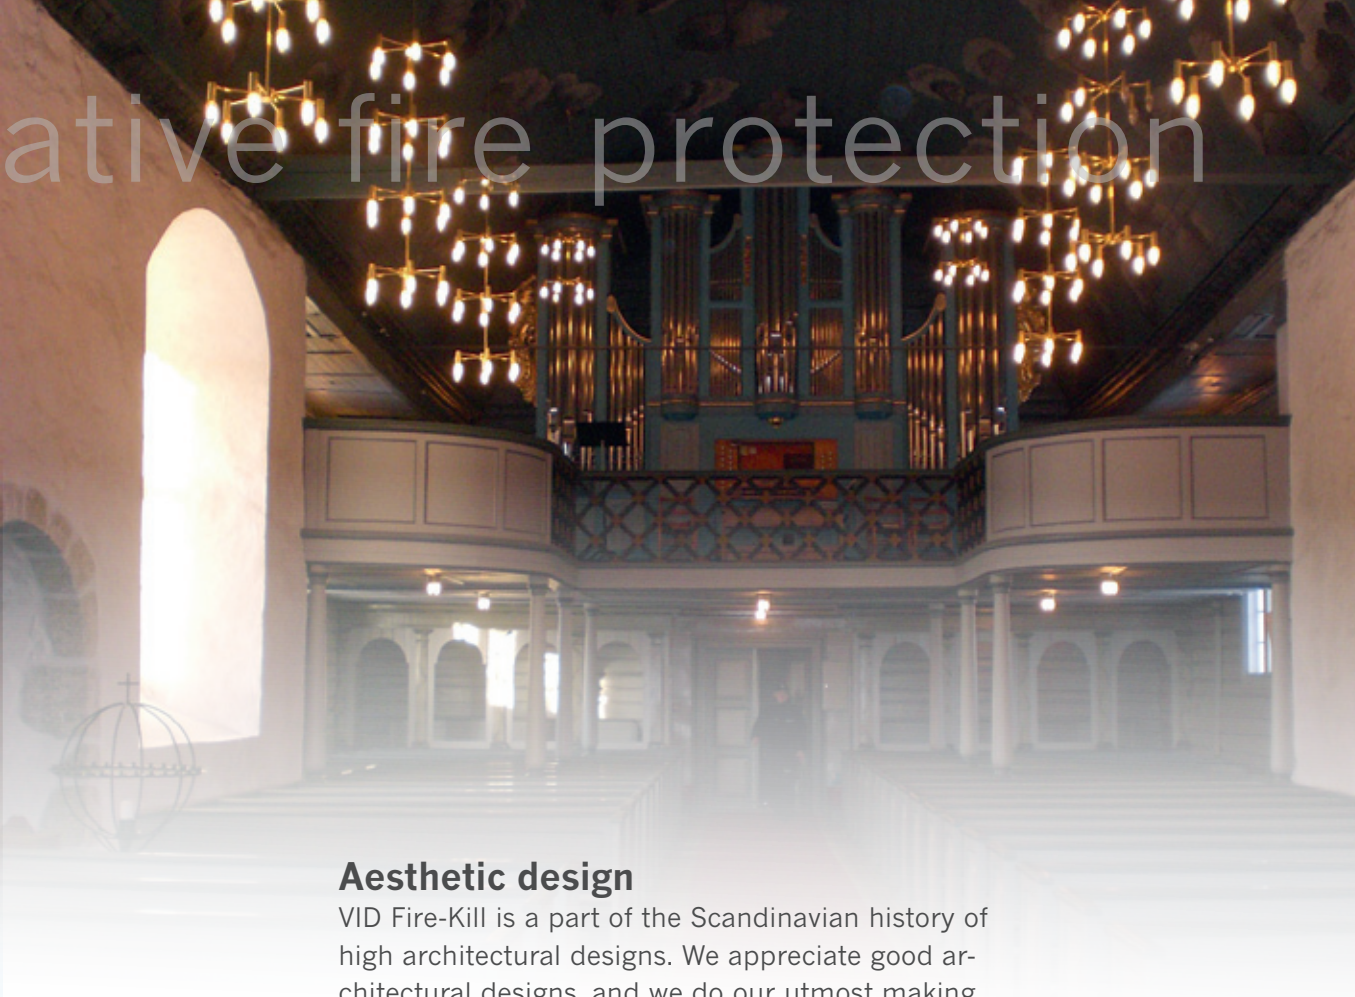

VID Fire-Kill - innov

Presentation of VID Fire-Kill

VID Fire-Kill is an innovative developer and manufacturer of water based active fire protection components and systems. VID Fire-kill specializes in water based fixed installed systems for environmental friendly fire protection. The company is located in Denmark, where all products are developed, manufactured and tested.

Aesthetic design

VID Fire-Kill is a part of the Scandinavian history of high architectural designs. We appreciate good architectural designs, and we do our utmost making fire protection products which aesthetically blend into new as well as old architectural buildings.

VID Fire-Kill - innov

Environmental friendly fire protection.

We feel obligated to do our utmost to protect our world which is why our systems provide high performance and reliable active fire protection applying the most environmentally sound methods. VID Fire-Kill has developed their widely used Fire Water Technology, which covers fire protection systems applying Water Mist sprays from nozzle systems operating at water pressures, which are within the pressure range of traditional sprinkler systems. This makes VID Fire-Kill combine the low water consumption and high firefighting abilities with the simple system designs and high reliabilities of the traditional sprinkler and water spray systems.

The VID Fire-Kill systems are characterized by:

- Being built from small scale thin walled piping and small size components. Making VID Fire-Kill systems only use low quantities of recyclable materials,
- Low water flow consumptions and low water pressures. Making VID Fire-Kill systems require low power supplies, and causing the systems to make low pollution and water damages from active fire protection.
- Low water pressures. Allowing the use of common pumps and approved sprinkler components for the VID Fire-Kill water mist systems causing the systems to have low power consumptions.

Active fire protection

Tested and approved water mist systems

We believe that good quality comes from good product design and well-organized manufacturing processes together with good raw materials. Our Staff are delegated well skilled and educated, and our quality assurance system is ISO 9001 approved.

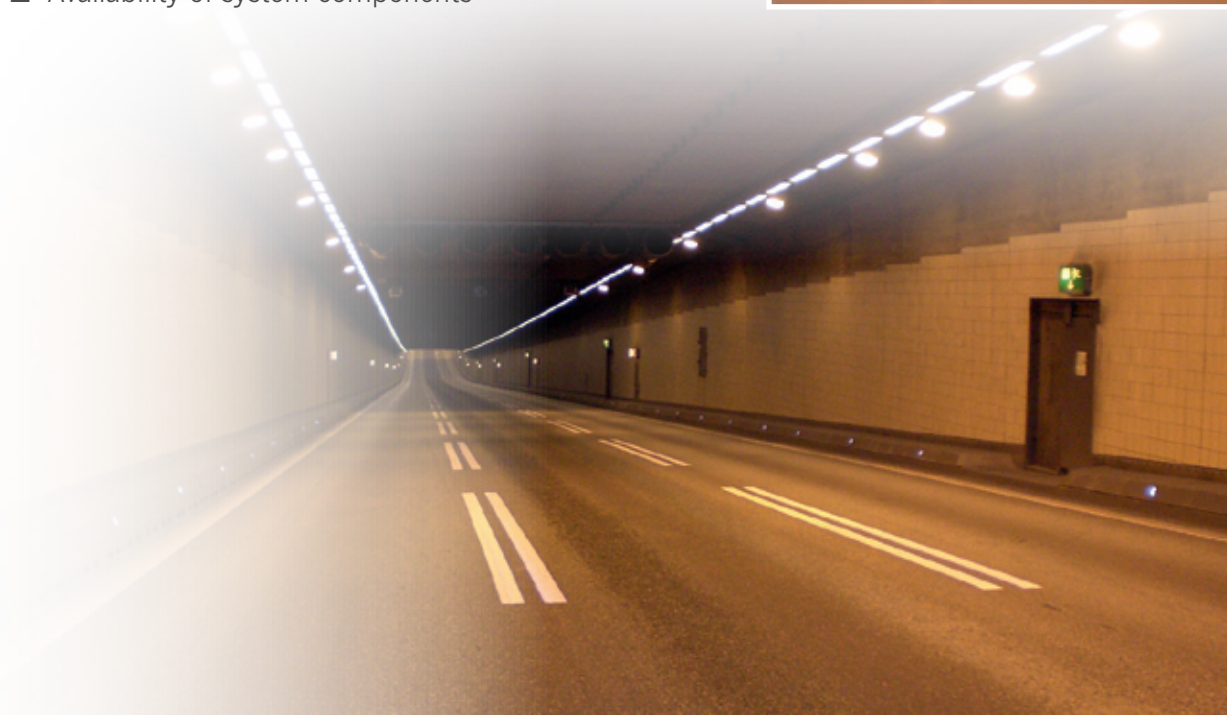

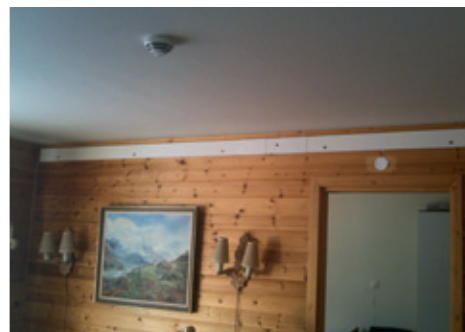

All our products are designed and tested by accredited fire test laboratories to comply with the latest updates of the international approval standards for water mist systems and components for fire protection at on-shore, maritime and off-shore locations and applications.

All our products are supplied fully chasuble to our customers.

Making a difference to our customers

Our obligation is to provide our customers with the best fire protection systems for their locations and applications regarding:

- System installation and low maintenance
- System performances and alarms etc.
- System approvals and system documentation
- Location design and aesthetics.
- Supplies and Power consumption
- Platforms and connections
- Demonstrations, service and after sales.
- Availability of system components

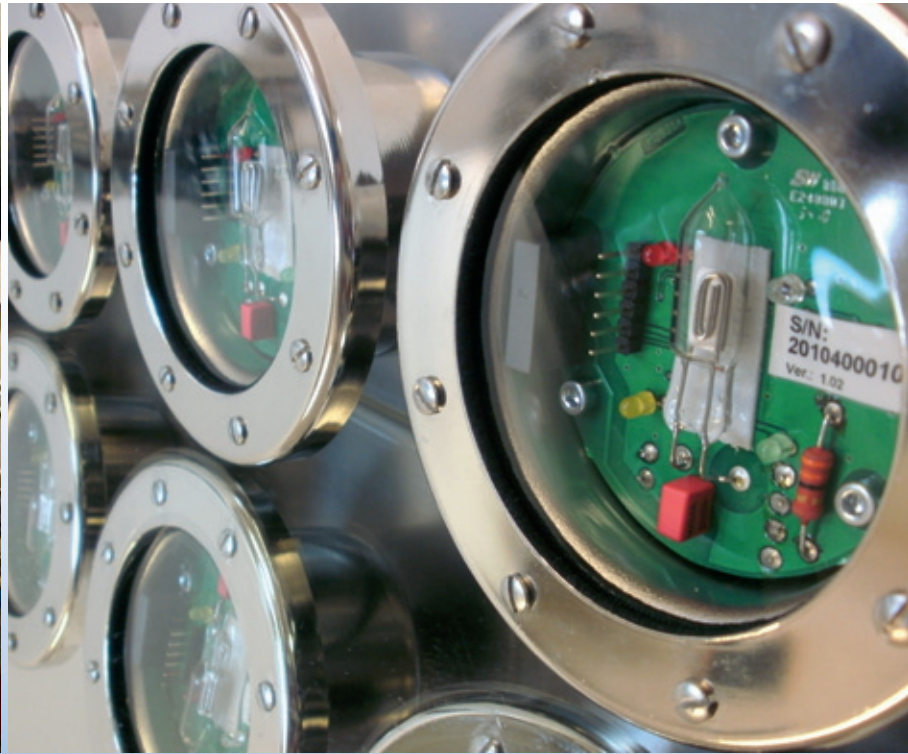

VID Fire-Kill - innov

Combined technologies

VID Fire-Kill master means of fire detection and electronic system controls as well as active fire fighting processes.

VID Fire-Kill combines the technologies into integrated products having only one platform, which makes the VID Fire-Kill products highly reliable, and simple to install and maintain.

ative fire protection

System and component Approvals

VID Fire-Kill have approved systems and components for almost all locations and applications.

Examples:

- Homes and institutions
- Offices and hotels, Restaurants, rooms, lobbies, Atriums
- Industries and storages
- Inheritages: Concert halls, Museums, churches etc.
- Aircraft hangars
- Underground structures: Carparks, stations, and tunnels
- Maritime applications, Approved products for all maritime applications.
- Off-shore. Approved water mist and water spray products in Bronze, Stainless steel & Titanium.
